

Checkpoint 4: (draft) report

Activity: Checkpoint 4: Plan draft discussion with supervisor

Course: 2526 Natural Computing (KW3 V)

Name: Robert Blaauwendraad

Problem statement	Insufficient	Sufficient	Good	Excellent	N/A
(*) Problem scope and relevance (scientifically)	Project does not make sense or just repeats assignments.	Project makes sense and has some minor novel elements. ✓	Project makes sense , adds substantially to existing work.	Project is interesting novel, embedded in literature, ambitious.	Cannot / did not assess.
(*) Definition of problem / question	Problem statement is absent, vague, or its relevance is unclear.	Problem statement is adequate in terms of direction but could be more specific in what exact problem is being solved and why.	Problem statement is clear and specific. ✓	Problem statement is clear and specific, and its relevance to the field is very clearly demonstrated.	Cannot / did not assess.
Review of related work	Related work is not discussed, not relevant to the project, or lacks important elements.	Review describes at least 3 related works that are each relevant to the project.	Describes relevant related works and their limitations/connections to the project.	Comprehensively describes related works. Limitations and connections to the current work are completely clear.	Cannot / did not assess.

Methodology and experimental design	Insufficient	Sufficient	Good	Excellent	N/A
(*) Approach appropriate & justified?	Approach is not suitable to address goals, flawed or lacks justification.	The methodology is adequate; flaws are minor. Most choices are justified.	Good methodology which may have only minor flaws and is well-justified.	Good methodology that is very well justified and has (almost) no flaws.	Cannot / did not assess.
(*) Scope of methodological work	Too similar to assignments or existing code without further exploration.	Sufficient exploration of the method and/or experiments.	Methods and expts are extensive with minor flaws, or of high quality.	Extensively developed methods and/or experiments that are high quality.	Cannot / did not assess.
(*) Quality of experimental design	Experimental design has major flaws (e.g., missing baselines, etc.).	Experiments are basic but informative, any flaws are minor.	Experimental design is good but could be extended for generalizability.	Experiments are well-designed to address the questions and have no flaws.	Cannot / did not assess.
(*) Reproducibility (based on report)	Description of methodology is overall unclear and/or key points are missing.	Overall methodology is somewhat reproducible. It may lack details, but someone with experience in the field could probably figure those out.	Mostly reproducible. Any missing details would probably not affect the outcome.	Methodology is very well-described and completely reproducible.	Cannot / did not assess.
Reproducibility (based on code)	Code not shared, documented, or does not run at all.	Code shared with basic README and runs with some effort.	Code shared with informative README including all requirements.	Code shared with comprehensive README, easy to understand and run.	Cannot / did not assess.

Methodology and experimental design	Insufficient	Sufficient	Good	Excellent	N/A
(*) Correctness & understanding of the described methods.	Significant factual errors reveal insufficient understanding of the subject matter.	Explanations show basic grasp of the methodologies and use cases, but may have minor flaws.	Explanations show a solid grasp of the methodology and its use cases.	The explanations show an in-depth understanding of the subject matter.	Cannot / did not assess.

Analysis of results	Insufficient	Sufficient	Good	Excellent	N/A
(*) Quality of quantitative analysis of obtained results	Analysis is shallow, inaccurate, or lacks depth and fails to examine data critically.	Analysis with some relevant metrics, but there may still be room for further exploration.	The analysis thoroughly examines the obtained data with suitable metrics.	The analysis goes beyond surface-level, offering insightful and robust interpretations of the data shown.	Cannot / did not assess.
(*) Quality of statistical analysis	Statistical analysis is necessary given the questions asked/conclusions drawn, but absent or strongly flawed.	Statistical analysis is either absent but not strictly needed for the problem (although it could have strengthened results), OR it is present and adequate for the goals, but could be improved.	Statistical analysis is present & correct where necessary. There may still be room for extending it.	Statistical analysis is thoughtfully used where informative and correct.	Cannot / did not assess.
(*) Quality of data visualization	Visualizations are absent/not suitable for the type of data, failing to show key patterns in the data.	The visualization communicates insights but may not optimally show relevant patterns.	The visualization effectively communicates insights and relevant patterns.	Visualizations are tailored to highlight key points, helping the reader see important patterns.	Cannot / did not assess.
(*) Quality of verbal descriptions	Lacks context or fails to interpret the results, leaving them without meaningful context or understanding.	Contextualizes and interprets the results, but there may be room for further exploration or greater emphasis on the implications.	Provides excellent context for at least some results; thoughtfully interprets their implications.	Provides exceptional context, nuanced insights in relevant patterns or trends, and explores their implications thoroughly.	Cannot / did not assess.

Conclusion, discussion, and interpretation	Insufficient	Sufficient	Good	Excellent	N/A
Clarity	Conclusions are unclear, convoluted, or fail to address all key points.	Conclusions are generally clear, but can be improved in conciseness and coherence.	Conclusions clearly and concisely summarize the main findings and most implications.	Conclusions clearly, concisely, and comprehensively relate key findings to their significance.	Cannot / did not assess.
(*) Validity	Conclusions fail to match presented results, are inconsistent or have unsupported claims.	Conclusions generally backed up by evidence. If claims are not fully supported, these are not key claims.	Conclusions accurately reflect results and consider key alternative explanations appropriately.	Conclusions rigorously match results with comprehensively analyzed alternative explanations.	Cannot / did not assess.

Conclusion, discussion, and interpretation	Insufficient	Sufficient	Good	Excellent	N/A
(*) Alignment with objectives	Conclusions do not align with the project's objectives or fail to address them adequately. Note: it's okay if it turns out the question cannot fully be answered yet, but the report should address to what extent the question can be answered and why.	Conclusions cover most key aspects of the project's objectives.	Conclusions align well with all key aspects of the project's objectives.	Conclusions & goals seamlessly align, demonstrating a full understanding of the project's implications.	Cannot / did not assess.
(*) Quality of discussion of limitations	The discussion fails to acknowledge important limitations.	Identifies the key relevant limitations, but could better explain their potential impact.	Identifies the key relevant limitations, addressing most of their implications.	Identifies key limitations and provides insightful analysis and reflection on implications.	Cannot / did not assess.
Quality of discussion of implications and/or future work	Relevant areas for future work are not recognized and addressed.	Identifies some relevant areas for future work, but not their significance.	Identifies and explains most relevant areas for future work and their relevance.	Comprehensively analyzes relevant areas for future work, excellently placing the project within the field.	Cannot / did not assess.

Report	Insufficient	Sufficient	Good	Excellent	N/A
Structure and flow	The report lacks a clear structure, e.g. misses some sections or info is scattered.	Report contains all relevant sections with most info in the right place, but coherence is not always explicit.	The report is well-structured, with clear headings, logical flow, and explicit transitions between sections.	The report exhibits an exceptional and highly organized structure, effectively guiding the reader through the content.	Cannot / did not assess.
(*) Writing style, conciseness	The report includes excessive irrelevant details and/or difficult sentences making it difficult to read.	Understandable, but could be improved in style and conciseness; May have some unclear statements but the gist is clear.	The work is mostly clearly written. There may be some room for trimming some unnecessary details but this does not hamper understanding.	The report is well-written, balancing clarity, precision and conciseness without excessive or irrelevant content.	Cannot / did not assess.
Polish	The report has numerous spelling, grammar, or formatting errors that hinder readability.	The report may have some spelling, grammar, format errors that could be improved but don't hinder understanding.	The report is well-polished, with minimal spelling, grammar, or formatting errors.	The report is meticulously polished, with impeccable spelling, grammar, and formatting, reflecting a high level of professionalism.	Cannot / did not assess.

Overall Score

Good to go!

The project has reached at least sufficient level in all of the areas where feedback was given (in agreement with the supervisor). There may still be tips for further improvement in the rubric comment boxes, but these should not make the difference between pass and fail.

Note: this only applies to the areas where you and the supervisor agreed that feedback would be focused on. Unless the full rubric was assessed and the full report was submitted, this does not necessarily mean that the full report will be assessed as sufficient.

Borderline

Attention is needed; there are some key criteria that may still be insufficient, or where the draft does not provide enough information to assess if these elements are sufficient.

Have a look at the feedback in the rubric and contact the supervisor if anything is unclear.

Danger zone

There are several key criteria that are still at insufficient level to pass the course, or the draft is unclear in key areas.

Have a look at the feedback in the rubric and contact the supervisor if anything is unclear.
