

Checkpoint 3: flash talks

Activity: Checkpoint 3: (submit slides for) project flash talks

Course: 2526 Natural Computing (KW3 V)

Name: Robert Blaauwendraad

Problem statement	Insufficient	Sufficient	Good	Excellent
(*) Definition of problem / question	Problem statement is absent, vague, or its relevance is unclear.	Problem statement is adequate in terms of direction but could be more specific in what exact problem is being solved and why. ✓	Problem statement is clear and specific.	Problem statement is clear and specific, and its relevance to the field is very clearly demonstrated.
Criterion Feedback Unclear from the flash talk why you want to address such a problem, (lack of explanations and details).				

Methodology and experimental design	Insufficient	Sufficient	Good	Excellent	N/A
(*) Approach appropriate & justified?	Approach is not suitable to address goals, flawed or lacks justification.	The methodology is adequate; flaws are minor. Most choices are justified. ✓	Good methodology which may have only minor flaws and is well-justified.	Good methodology that is very well justified and has (almost) no flaws.	Not applicable or hard to assess from flash talk.
Criterion Feedback It seems ok, but lack of details on the hyperparameter choices and unclear how the algorithms work. Have you reused existing ones or you have own implementation? Be sure that those elements will be clear in the last version of the report.					
(*) Quality of experimental design (of experiments in the presentation)	Experimental design has major flaws (e.g., missing baselines, etc.).	Experiments are basic but informative, any flaws are minor. ✓	Experimental design is good but could be extended for generalizability.	Experiments are well-designed to address the questions and have no flaws.	Not applicable or hard to assess from flash talk.

Methodology and experimental design	Insufficient	Sufficient	Good	Excellent	N/A
Criterion Feedback Unclear from the flash talk how you can make sure that the comparison is fair?					

Analysis of results	Insufficient	Sufficient	Good	Excellent	N/A
(*) Quality & scope of analysis of presented results	Analysis is shallow, inaccurate, or lacks depth and fails to examine data critically.	Analysis with some relevant metrics and/or visualizations but there may still be room for further exploration. ✓	The analysis thoroughly examines the obtained data with suitable metrics and/or visualizations	The analysis goes beyond surface-level, offering insightful and robust interpretations of the data shown.	Not applicable or hard to assess from flash talk.
Criterion Feedback Mostly ok, but lack of details on the quantitative results and are you planning to conduct further exploration?					

Conclusion, discussion, and interpretation	Insufficient	Sufficient	Good	Excellent	N/A
(*) Validity	Conclusions fail to match presented results, are inconsistent or have unsupported claims.	Conclusions generally backed up by evidence. If claims are not fully supported, these are not key claims. ✓	Conclusions accurately reflect results and consider key alternative explanations appropriately.	Conclusions rigorously match results with comprehensively analyzed alternative explanations.	Not applicable or too hard to assess from flash talk.
Criterion Feedback Lack of details on hyperparameter sensitivity.					

Overall Score

On the right track!

You seem to be on the right track with a properly motivated question, suitable approach, and solid results + interpretations.

Keep in mind though that we cannot score all criteria fully based on these short flash talks. If you have doubts, contact the supervisor.

Sufficient for now, more work may be needed ✓

You have made a good start, but there may be some issues that still need improvement for the final report. However, you should have enough time to address these in the last two weeks.

If you have doubts or questions, contact the supervisor. Keep in mind that we cannot score all criteria fully based on these short flash talks.

Danger zone

It could be that there are some major issues with your project, or that we cannot yet assess from the flash talk whether you have enough results for a final report, or that you seem to be running behind on schedule in some (other) way.

Please contact the supervisor asap to discuss how you will address these issues. Also keep in mind that we cannot score all criteria fully for the final report based on these short flash talks.
